Terminal fixes

A BLOCK PRINTS

1 Off market prints on SPY and QQQ

Today on SPY four prints of 126K shares at 773.25 (from 16:24 to 16:31) with the price at 763 create the two star 773.25 · 379K level and stretch the candles up to 774. Before the open there are already candles with wicks up to 774 with the price at 766. On QQQ many candles reach 725 and 726 with the price between 709 and 715.

B CHART AND WALLS

2 Lines out of place after changing WALLS

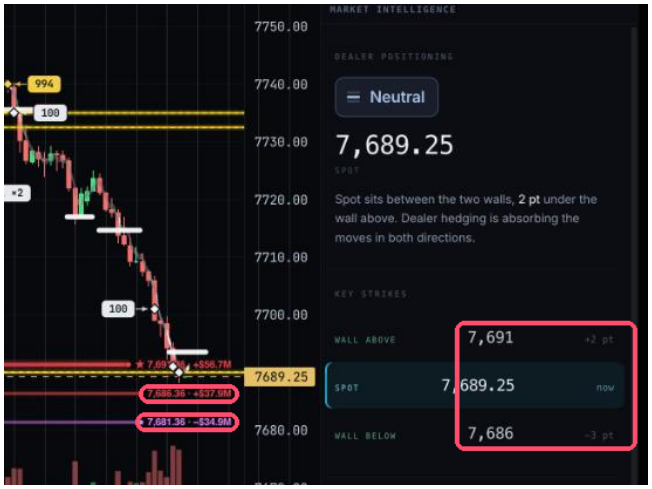

On ES, as soon as I change WALLS (here from Top 15 to Top 3), the candles are redrawn on the new scale while levels, block print labels and the grey line stay on the old one, about 10 points lower. Today everything lines up again in under 2 seconds (yesterday about 8), but it still happens every time.

3 Two different numbers for the same wall

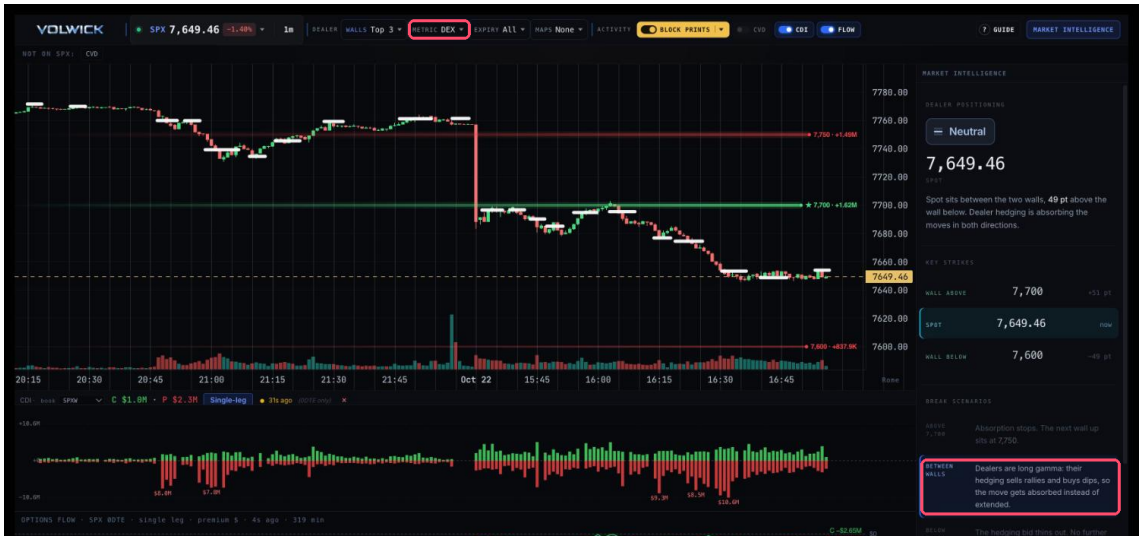

On ES and MES the wall below the price reads 7,686.36 on the chart and 7,686 in the panel; the one above reads 7,691 in the panel. The chart number is the SPX strike plus the basis, so it carries decimals that keep changing, and it is not a real ES price because ES moves in 0.25 steps. Proposal: show the same value in both, rounded to the tick, and keep the SPX strike in the wall box.

C MARKET INTELLIGENCE

4 The text does not change when I change METRIC

On SPX and ES with GEX, CEX and DEX the panel shows the exact same text: "Dealers are long gamma: their hedging sells rallies and buys dips…". The guide says that changing METRIC makes the panel describe positioning for the chosen metric. On NQ the text does change.

D DATA AND INTERFACE

5 % change: ES fixed, the others still a bit off

ES and MES are now correct. The others are calculated from last night's last price instead of the official close, and on GOLD the gap reaches 0.2 points. Comparison at 16:32 on 22 October with the 21 October closes from Yahoo Finance.

INSTRUMENT	VOLWICK	CLOSE 21 OCT	CORRECT CHANGE
GOLD	4,069.60 -2.16%	4,150.00	-1.94%
QQQ	708.80 -2.34%	725.20	-2.26%
RTY	2,778.70 -0.49%	2,794.20	-0.55%
NQ	29,309.00 -2.38%	30,007.00	-2.33%
SPY	762.51 -1.41%	773.09	-1.37%
ES	7,690.75 -1.40%	7,800.25	-1.40% correct
SPX	7,650.89 -1.38%	7,757.17	-1.37% correct

6 Wrong VIX % change

The terminal shows VIX 19.28 +14.90% (earlier 19.34 +15.26%). Yesterday's close on Yahoo Finance is 16.68, so the correct change is +15.59% (and +15.95%). The terminal uses a reference around 16.78.

7 Pane order differs between SPY and ES/SPX

On ES and SPX the CDI pane is on top and OPTIONS FLOW below; on SPY it is the other way round, OPTIONS FLOW on top and CDI below. Better to use the same order on every ticker.

Matt, for any suggestion or update you have in mind, let us know.
